Fiberglass Plywood Panels

Description:

Fiberglass plywood sandwich panels, produced by Composite Box, feature two high-strength FRP sheets laminated over a plywood core, formed from 7 to 13 layers of thin wood. This composite offers superior impact resistance, UV protection, and corrosion resistance, overcoming plywood’s limitations like rot and water sensitivity. Customizable from 9 to 22 mm thick, up to 12 meters long, and 3.2 meters wide, these panels are ideal for caravans, truck bodies, and construction, ensuring durability and low maintenance.

Features:

- High-strength FRP skins
- Plywood core (7 – 13 layers)
- Customizable thickness, sizes
- UV, corrosion-resistant
- Impact-resistant design

Advantages:

- Enhanced durability, strength
- Waterproof, rot-resistant
- Easy to maintain, install
- Ideal for high-strength applications
- Long-lasting performance

Common Parameters

			
Customer Satisfaction	Quality Assurance	Advanced Production Line	Customization
Insisting on high quality products and servers, centered around customer experience	We strictly control every production process to bring reliable quality assurance to our customers	The world’s top production line ensures product precision and efficiency	We provide 100% customization, making orders less difficult
