GRP Honeycomb Panel

Description:

GRP honeycomb panels are high-performance sandwich panels with a PP honeycomb core and GRP skins. These thermosetting materials ensure strength and durability for vehicle bodies, RVs, and construction. Composite Box offers customized panels with tailored sizes, CNC cutting, and material composites, ideal for transportation, shipbuilding, and industrial applications, providing lightweight, corrosion-resistant solutions.

Features:

GRP honeycomb panels feature a PP honeycomb core with customizable thickness (8-100 mm) and density (80-210 kg/m³). The gel-coated GRP skin offers a smooth, durable finish in various colors. Supporting sizes up to 11.8m x 3.3m, they provide bending and impact resistance. Tailored for transportation and construction, they include CNC cutting and material composites for specific needs.

Advantages:

GRP honeycomb panels resist corrosion, acids, and harsh weather, outperforming aluminum and steel. They withstand impacts and scratches, ideal for cargo trucks and RVs. Lightweight for fuel efficiency, their gel-coated surface is easy to clean. Composite Box provides full customization, ensuring precise sizes and finishes, making these panels a durable, high-performance choice for demanding applications.

Common Parameters

 Customer Satisfaction	 Quality Assurance	 Advanced Production Line	 Customization
Insisting on high quality products and servers, centered around customer experience	We strictly control every production process to bring reliable quality assurance to our customers	The world’ s top production line ensures product precision and efficiency	We provide 100% customization, making orders less difficult
