Cargo bars

Description:

Cargo bars, also known as load lock bars, secure cargo in trucks, trailers, and pickups. Available in steel and aluminum alloy, they adjust from 50 to 112 inches, fitting various vehicles like refrigerated and box trucks. Designed for horizontal or vertical use, they stabilize small or palletized cargo. With types like ratchet, hydraulic, and E-track bars, our high-quality kits ensure reliable performance,经过 rigorous testing for long-distance transportation safety.

Features:

Our cargo bars feature adjustable ranges (50 – 112 inches) for versatile vehicle compatibility. Constructed from galvanized steel or ultra-high-strength aluminum alloy, they include rubber anti-slip pads for secure gripping. Options like ratchet-style, hydraulic, and heavy-duty industrial bars offer precise tension control and easy installation. With 1.5-inch diameters and 30% thicker walls on hydraulic models, they resist vibration and corrosion, ensuring stable cargo securing in harsh environments, suitable for refrigerated trucks, pickups, and trailers.

Advantages:

Cargo bars provide unmatched stability, preventing cargo shifts during long-haul transport. Their durable steel or aluminum construction ensures longevity and corrosion resistance, reducing maintenance costs. Easy to install and adjust, they save time and enhance efficiency. Anti-slip rubber pads increase friction, ensuring a firm grip. Versatile for box trucks, pickups, and refrigerated vehicles, they support diverse cargo types, from pallets to small items, offering cost-effective, reliable solutions for safe and secure transportation.

Common Parameters

 Customer Satisfaction	 Quality Assurance	 Advanced Production Line	 Customization
Insisting on high quality products and servers, centered around customer experience	We strictly control every production process to bring reliable quality assurance to our customers	The world’ s top production line ensures product precision and efficiency	We provide 100% customization, making orders less difficult
